Final Output Example:

Evan Woods - Rogue Theory
--

Hey Evan you can find the copy deliverables here --> Evan Woods - Rogue Theory

The copy package consists of:

- 5 video ad scripts
- 5 headlines
- 5 primary text of varying lengths

Training Guide

DIRECT RESPONSE AD COPY

TRAINING GUIDE

Everything you need to write high-converting Meta ad campaigns for our clients

For Experienced Copywriters — Internal Use Only

1. What We Do

We are a direct response copywriting operation embedded inside a marketing agency. Our job is to write complete Meta ad campaign packages for clients across a wide range of service-based businesses.

Every client gets the same deliverable structure — a full campaign package written to a consistent framework with high standards for voice, clarity, and conversion. We write for real business owners speaking directly to their target market, and every word has to earn its place.

This is not brand copywriting. This is not content marketing. This is direct response — copy that exists to make someone stop scrolling, feel understood, and take one specific action: click and book a call.

---

2. The Clients We Work With

Our clients are marketing agency owners who have built or are building their own client-facing services. They come to us to write the Meta ad copy that fills their sales pipeline.

Their clients are established, service-based business owners — not startups, not side hustles. Think businesses with real revenue, real teams, and real capacity to take on more work.

Niches We Have Written For:

- Roofing companies
- HVAC companies
- Kitchen and bath remodelers
- Design-build remodeling firms
- Med spas and aesthetic clinics
- Cosmetic surgeons
- Orthopedic surgery practices
- Cash-pay and hybrid chiropractic practices
- Dental practices (Invisalign)
- Addiction and substance abuse treatment centers
- Personal injury and other law firms
- Veterinary practices
- Pest control companies
- Plumbing companies

- Electricians and trades
- SEO and marketing agencies
- AEC firms and PR agencies

New niches come in regularly. The framework stays the same — the language and pain points shift to match the market.

---

3. The Standard Campaign Package

Every client gets the same full package. No exceptions. These are the assets that make up one complete campaign:

3.1 Video Script 1 — Pain-Point / Origin Story Angle

This script opens on the lived experience of the target market. It agitates the core problem, identifies the root cause, then pivots to the system and guarantee. It speaks first-person to camera at a natural, conversational pace.

- Target length: 60 to 120 seconds at natural speaking pace (roughly 150 to 280 words)
- Opens on a real pain point the audience immediately recognizes
- Identifies the root cause of the problem — not just the symptom
- Pivots cleanly to the system as the solution
- Ends with the guarantee and a clear CTA to book a call
- Never opens the same way as Script 2

3.2 Video Script 2 — "Put Us to Work" (Future State)

Script 2 flips the framing so the prospect is hiring you. No system breakdown at all. Sells the outcome and future state only. The subject describes what the client's world looks like 90 days from now — what has changed, what they can see, how it feels. No process, no pillars.

- Opens with 'Put us to work for the next [X] days'
- States the offer and guarantee immediately
- Founder introduces themselves briefly
- Paints the future state in specific, operational detail — what does a normal week look like now?
- Closes with the offer, qualifier, and CTA

- No pillar names, no system explanation — outcome only

3.3 Video Script 3 — Problem Recognition Hook

Script 3 opens with a specific, hyper-relatable moment the ideal prospect immediately recognizes. The hook does double duty — grabs attention and quietly filters out anyone who isn't the target client. The offer and guarantee come after the agitation, not before.

- Opens on a concrete, specific scenario the right prospect has lived through
- Names exactly what it costs when that problem goes unsolved
- Pivots to the system at a benefit level only — enough to be compelling, not enough to explain the method
- Offer and guarantee land after agitation — never before
- Closes with a qualifier and CTA

3.4 Five Meta Headlines

Five attention-capturing headlines written specifically for the target market. Each must represent a meaningfully different angle or concept — not variations of the same line. The five angles to cover:

- Direct offer: number, timeframe, and guarantee (e.g. '45 New HVAC Customers. 90 Days. Or You Don't Pay.')
- Pain or self-identification: usually a question the right prospect answers immediately (e.g. 'Is Your Dispatch Board as Full as It Should Be?')
- Tribal truth: an insight specific to this niche that only the right person would recognize (e.g. 'A Slow Month in HVAC Is a Systems Problem.')
- Outcome or desire: focused on what they want, not what they're avoiding (e.g. 'The First HVAC Company to Answer Wins the Job.')
- Qualifier or specificity: signals exactly who this is for (e.g. 'Built Exclusively for HVAC Companies.')

- Target length: 35 to 55 characters
- No two headlines should use the same structural format
- Every headline must be niche-specific — nothing that could apply to any agency

3.5 Primary Text — Ultra Short

The tightest version of the offer. Every word earns its place. Opens with the audience callout and offer, qualifies the reader, states the guarantee, closes with the CTA.

- 4 to 6 lines maximum
- Lead with the direct offer
- One qualifier line (who this is for / what kind of result)
- One repeller line (who this is not for) — optional but effective
- Guarantee line
- CTA to book a call

3.6 Primary Text — Short Form (2 Variations)

Two structural variations that package the offer, system, proof, and guarantee differently so prospects don't see the same format twice across ad sets. We do not use Variation 1 (// sections) as a standard deliverable.

Variation 2 — ALL-CAPS Bold Headers

Opens with a method-focused hook and uses ALL-CAPS headers: THE STRATEGY / WHY THIS WORKS / WHAT MAKES THIS DIFFERENT. More structured and scannable. Works well for trades and blue-collar audiences. The strategy section walks through the system at a benefit level — what each stage produces, never how it works.

Variation 3 — Numbered Steps with Emojis

Leads with the guarantee as a standalone statement. Uses #1. #2. #3. #4. numbered steps to explain the system at a benefit level. Blends in one or two emojis as visual anchors in the feed. Light, scannable, and punchy. Works well for any niche.

3.7 Primary Text — Problem-First

Opens with a sharp question or pain observation the reader answers in their own head. Agitates the core problem, pivots to the system and guarantee. This is the copy that connects most emotionally with the right prospect.

- No // section structure
- Opens with a single sharp question the target market answers yes to
- Agitation focuses on the cost of the problem — not just the symptom
- Pivot to the offer is clean, not abrupt
- Ends with the guarantee and CTA

---

4. Client Intake and Strategy Process

Every campaign starts with a strategy approval step — no copy gets written until the positioning angle has been confirmed. This protects the quality of the work and prevents wasted rounds of revision.

4.1 Reading Client Materials

Clients upload PDFs containing their offer, unique mechanism, system pillars, sales script, and credibility proof points. Read every document before forming any opinion on strategy. Do not skip materials — thin documents often contain the most important insight.

When reading, look for:

- The exact guarantee language (word for word — this goes in the copy verbatim)
- The system name and pillar names
- What each pillar actually delivers at an outcome level
- Verified proof points — specific numbers, client results, years in market
- Who the ideal client is and what qualifies them
- What the client has personally experienced in this niche
- Any case studies — verify before using; never fabricate

4.2 Flagging Missing Information

Before writing, flag anything that could affect copy quality:

- No case studies or verified results — note this and confirm credibility approach
- Conflicting guarantee language between documents — flag before writing
- No clear system name — ask for one or propose one
- Two offer options presented — confirm which to use
- Credibility claims without specific numbers — keep vague or remove

4.3 Writing the Strategy

The strategy note is delivered to the client for approval before writing begins. It should cover:

1. Who the target market actually is — their lived experience, not just their job title
2. The core positioning angle for Script 1 and Problem-First — the insight that makes the copy land
3. Angle assignments for each asset in the package
4. Credibility approach — what proof exists, what we use, what we don't invent
5. Any flags or questions that need answering before writing

Rule
Writing begins only after the strategy is approved. If the client confirms the approach, proceed with the full package.

---

5. Copy Standards and Voice Guidelines

These standards apply to every asset in every campaign. There are no exceptions. Read this section more than once.

5.1 Reading Level and Language

- 5th grade reading level throughout. Simple words always beat impressive ones.
- Write like a real person talking to another real person — not like an agency.
- Use tribal and niche-specific language. An HVAC owner talks about dispatch boards and techs, not 'operational resources'. A dentist talks about cases and consultations, not 'patient conversion events'.
- No marketing jargon. No agency-speak. Speak the language of the market.
- Contractions are your friend: you're, don't, won't, can't, they've.

5.2 Benefits Over Features

This is the most important principle in the entire document. Read it twice.

Every ad agency and every competitor talks about what their system does. We talk about what the client's life looks like after the system is running. Features are the mechanism. Benefits are what the client actually cares about.

Wrong (Feature)
We use a three-stage qualification system that filters out renters, wrong timelines, and bad areas before anyone reaches your team.

Right (Benefit)
The homeowners who do come through are already expecting your call. They picked the time themselves. That's a completely different conversation.

When writing about the system, always lead with the outcome. What does the client get? What does their business look like? What does a Monday morning feel like when this is running?

5.3 Curiosity Gap — Never Over-Explain the System

The job of the ad is to get the click and the call — not to explain the entire methodology. Name the system. Tease what it does. Leave enough intrigue that the prospect needs to book a call to understand the full picture.

- Name pillars but don't over-describe them
- One sentence per pillar maximum in most cases
- Never reveal exactly how the system works
- If the prospect feels like they could DIY it after reading the ad, you've given too much

5.4 Qualifier and Repeller Language

Every package should help the right prospect self-select in and the wrong prospect move on. This improves lead quality and keeps sales calls from wasting time.

- Qualifier language: 'For established roofing companies with reps in the field...'
- Repeller language: 'Not leads your office is chasing down while the homeowner calls someone else.'
- Never be harsh — just be specific about who this is built for

5.5 Tone by Audience

Adjust warmth and directness based on who you're writing for. The core standards don't change — only the temperature.

- Trades and blue-collar (HVAC, roofing, plumbing): Direct, confident, zero fluff. These owners have been burned before and have no patience for vague promises.
- Med spas and wellness: Warmer, more personal. Light emoji use is appropriate. These owners built their practice around care, and the copy should reflect that.
- Professional services (dental, ortho, law, cosmetic surgery): Confident and polished. ROI-specific. These are educated business owners who respond to specifics and logic.
- B2B agency clients: Peer-level. These are smart operators — write to them as equals, not as prospects to be sold.
- Founder-led brands: First-person 'I' voice throughout when the brand is built around an individual.

6. Absolute Rules — Never Break These

6.1 Never Fabricate Proof Points

No invented case studies. No made-up statistics. No fabricated client results. If a number isn't in the client materials, it doesn't go in the copy.

Credibility comes from: the guarantee structure, the specificity of the system, the named mechanism, and real verified proof points the client has provided. That's enough.

6.2 Guarantee Language

The risk reversal language must always use approved phrasing. Use what the client has written in their offer document. Clean it up if needed but preserve the intent.

Approved Phrasing

"You don't pay" / "It's free" / "We keep working at no additional cost" / "We work for free until you do" / "You don't pay until we do"

Never Use

"We work for free" or "we'll work for free" as a standalone construction — always tie it to the condition: 'or we work for free until you do.'

6.3 Platform Names

Never mention Facebook, Instagram, Google, or any specific ad platform by name in consumer-facing copy. Say 'ads' or describe the action without naming the platform.

6.4 Numbers Format

Always write numbers as '30+' not '30 plus'. Use '$60K' not '$60,000' unless the full number adds impact. Be consistent throughout a single package.

6.5 Em Dashes

No em dashes (—) in any copy. They are one of the strongest signals of AI-generated writing. Use commas, periods, or restructure the sentence.

---

7. The Humanizer — AI Patterns to Eliminate

Before delivering any copy, run a full humanizer pass. This is not optional. The goal is copy that reads like a real person wrote it — not an AI generating marketing text.

Below are the most common AI patterns to identify and eliminate. This list is illustrative, not exhaustive. Apply the underlying logic to catch patterns not listed here.

7.1 The 7 Biggest AI Tells

6. Staccato fragment stacking — Three or more short fragments on consecutive lines
7. 'Here's the [noun]:' transitions — Any setup phrase before a dramatic reveal
8. Tricolons — Exactly three parallel items or phrases in a row
9. Preachy generalizations — 'Most people...', 'Everyone knows...', 'Too many...'
10. Generic dramatic CTAs — 'Ready to transform your business? Let's talk.'
11. Label-then-explain sections repeated 3+ times with bold headers
12. Uniform rhythm and relentless positivity — no variation, no acknowledgment of complexity

7.2 Specific Patterns to Flag and Remove

Overused AI Transitions

- 'Here's the truth / kicker / best part / thing / deal'
- 'The truth is...' / 'Let's be real...'
- 'The result?' / 'The difference?' / 'Sound familiar?'
- 'Bottom line:' / 'The takeaway?' / 'Long story short...'
- 'In other words...' / 'Put simply...' / 'Think about it this way...'
- Any sentence beginning with 'Here's' followed by a dramatic reveal

Robotic Contrasts

- 'Not this, not that, just this'

- 'Stop doing X. Start doing Y.'
- 'This isn't just X — it's Y.'
- 'It's not about X. It's about Y.'
- 'X doesn't work anymore. Y does.'
- 'Not X. That's Y.' as two separate lines

Staccato Fragment Stacking

Three or more consecutive short fragments on separate lines create a robotic 'punch-punch-punch' rhythm that immediately reads as AI.

Wrong
Slow response. Missed calls. Lost jobs. That's what happens without a system.

Right
Slow response and missed calls are where the jobs quietly go to someone else.

Tricolons — Rule of Three

AI defaults to groups of exactly three because it's common in training data. When you see three parallel items, ask whether you need all three or whether two or four would be more natural.

Wrong
Faster growth, better retention, higher margins.

Right
Faster growth and the kind of retention that compounds over time.

Em Dashes

Research confirms AI overuses em dashes as dramatic pauses. More than two in a single piece is a red flag. When in doubt, use a comma or restructure.

Preachy Generalizations

- 'Most people...' / 'Most HVAC companies...' / 'Most dentists...'
- 'Everyone knows...' / 'We all know...'

- 'Too many [audience]...'

These talk AT the reader instead of WITH them. Let the reader self-identify instead of being told what they do.

Wrong
Most roofing companies rely on word of mouth and inconsistent ads.

Right
If the referral pipeline dried up tomorrow, how long before the calendar starts feeling it?

AI Vocabulary Words

These words appear far more frequently in AI-generated text than in human writing. One or two is fine. Clustering them together is a signal.

- delve / tapestry / landscape (metaphorical) / foster / leverage / nuanced / multifaceted
- comprehensive / pivotal / cutting-edge / robust / elevate / realm / resonates
- Moreover / Furthermore / Additionally as paragraph starters
- 'It's worth noting that...' / 'In today's [industry] landscape...' / 'A testament to...'

7.3 The Mandatory Second Pass

After completing any rewrite, go back and read the entire piece as if someone else wrote it. Apply every detection category again. Specifically ask:

13. Did any of my rewrites just swap one AI pattern for a subtler version of the same thing?
14. Did I introduce any 'Here's' or 'That's' setup phrases that weren't in the original?
15. Did I add em dashes that aren't strictly necessary?
16. Did I create any new formulaic contrasts?
17. Did I stack any new fragments?
18. Did I add a dramatic one-liner that exists purely for emphasis?
19. Do consecutive paragraphs start with the same word?
20. Did I add any mic-drop closing lines after the CTA?

7.4 Self-Check Checklist

Run this before delivering any final copy. If any answer is YES, go back and fix it.

- Does the word 'Here's' appear anywhere?

- Are there more than 2 em dashes in the entire piece?
- Are there any 3+ fragment stacks on consecutive lines?
- Are there any tricolons (exactly 3 parallel items with matching structure)?
- Is there a 'Not X. That's Y.' or 'Not X — Y.' contrast pattern?
- Is there a standalone dramatic one-liner isolated purely for emphasis?
- Does the CTA use vague language like 'Ready to...' or 'Let's talk'?
- Is there a closing punchline after the CTA that could be cut?
- Do any consecutive paragraphs start with the same word?
- Could any setup phrase + data be replaced by just stating the data directly?

---

8. How to Write Each Asset

8.1 Video Script 1 — Pain-Point Angle

Step 1: Identify the single most emotionally resonant pain point for this market. Not the most logical — the most felt.

Step 2: Open on the lived experience. The reader should feel like you're describing their week before you've said anything about your offer.

Step 3: Name the root cause. 'That's not a sales problem. That's a pipeline problem.' One pivot line that reframes the issue.

Step 4: Introduce the system at a benefit level. Name it. Describe what it produces. Leave the how for the sales call.

Step 5: State the guarantee word for word. Close with a qualifier and CTA.

- Write at natural speaking pace — read it out loud and time it. 120 seconds max.
- First person, camera-facing. The subject speaks directly to the viewer.
- No stiff corporate language. This is a founder talking to a peer.

8.2 Video Script 2 — Variation 2 (Future State)

Don't explain the system. Don't walk through pillars. Just describe what the client's world looks like 90 days from now. What do they see? What's different? What can they stop worrying about?

Structure: Open with 'Put us to work.' State the offer and guarantee. Introduce yourself briefly. Then paint the future state in specific, operational detail. Close with the offer and qualifier.

8.3 Video Script 3 — Problem Recognition Hook

Open on a specific moment the ideal prospect immediately recognizes. The more specific, the better. A broken AC at 2pm. A patient who booked elsewhere before the callback came. A roofing rep sitting across from a renter.

The hook does double duty: grabs attention AND filters the audience. If the wrong person reads it and doesn't recognize themselves, that's fine. The right person should feel like you just described yesterday.

Pivot to the system and guarantee. Keep the system explanation at a benefit level only — enough to be compelling, not enough to give away the method.

8.4 Five Meta Headlines

Write all five across the required angles. Every headline must be niche-specific — nothing that could apply to any agency or any industry. The five angles are fixed:

- Angle 1: Direct offer with number, timeframe, and guarantee
- Angle 2: Pain or self-identification question
- Angle 3: Tribal truth — an insight only the right market would recognize
- Angle 4: Outcome or desire — what they're chasing, not what they're avoiding
- Angle 5: Qualifier or specificity — signals exactly who this is built for

8.5 Ultra Short Primary Text

Write this last. By this point you know the market, the offer, and the best angles. The ultra short is the tightest distillation of all of it.

Open with the audience callout in ALL CAPS. State the offer. One qualifier line. One guarantee line. CTA. Done.

8.6 Short Form — All Three Variations

Lead every variation with the direct offer and guarantee. The difference is structural packaging, not core message.

Variation 2 uses ALL-CAPS headers (THE STRATEGY / WHY THIS WORKS / WHAT MAKES THIS DIFFERENT). Variation 3 uses numbered steps with emojis (#1 through #4). Both are produced for every client.

In the system description section of both variations, lead every pillar description with the outcome — not the process. 'We make sure every lead gets followed up with fast enough to win the job' not 'We implement an automated follow-up sequence.'

8.7 Problem-First Primary Text

This is the copy that earns the most attention from prospects who are closest to being ready. Write it carefully.

Open with a single sharp question. The ideal prospect should answer it immediately in their own head without prompting. 'Do you know how many Invisalign cases your practice will close next month?' A dentist with inconsistent case flow reads that and feels it.

Agitate the problem at a cost level — not just 'leads are inconsistent' but 'that inquiry that came in Tuesday went to another practice by Thursday and you never knew it happened.'

Pivot is clean. Pivot is one line. 'That's what [System Name] was built to fix.' Then describe the outcome, state the guarantee, close with CTA.

---

9. Session Workflow — How a Campaign Gets Written

21. Client uploads PDFs. Read every document before forming an opinion.
22. Synthesize all materials. Identify the offer, system, pillars, credibility, and any gaps.
23. Write and deliver the strategy note for approval. Wait for confirmation before writing.
24. Write the full campaign package in one pass, applying all copy standards.
25. Run the humanizer pass on every asset. Apply the self-check checklist.
26. Deliver the complete package in one clean output, formatted for easy copy-pasting.
27. Revise based on targeted feedback — make only the changes requested, no full rewrites unless specified.

> **Important**
> Copy is delivered in plain text format with clear section labels, not in a document. The client or their team copies each asset directly into their ad platform.

---

10. Formatting for Final Delivery

All copy is delivered in a single clean output. Follow this formatting every time:

- Client name and system name at the top as a header
- Niche below the header
- Each asset separated by a horizontal divider line
- Asset name clearly labeled before each piece
- Ample white space within primary text for scannability on Meta — no dense paragraph blocks
- Guarantee language is always identical across all assets in a single package
- No editorial comments, revision notes, or bracketed instructions in the final output

For primary texts specifically: use generous line spacing. A wall of text fails on mobile. If a section feels dense, add a line break. When in doubt, break it up.

---

11. Quick Reference — Rules at a Glance

Language Rules

- 5th grade reading level
- No em dashes
- No tricolons
- No 'Here's the...' setup phrases
- No robotic two-line contrasts ('Not X. It's Y.')
- No staccato fragment stacks of 3+
- No platform names (Facebook, Instagram, Google)
- Numbers written as 30+ not '30 plus'
- No marketing jargon or agency-speak

Credibility Rules

- Never fabricate case studies, statistics, or client results

- Only use proof points verified in client-provided materials
- If credibility is thin, rely on the guarantee structure and system specificity
- General experience (revenue generated, leads produced) is acceptable as a broad credibility line

Guarantee Rules

- Use client's exact guarantee language — clean up phrasing but preserve intent
- Always use 'you don't pay' or 'we keep working for free until you do' framing
- Guarantee language must be identical in every asset of the same package
- Never frame the guarantee as 'we work for free' standalone — always tied to the condition

Script Rules

- Max 120 seconds at natural reading pace for all three scripts
- First person, camera-facing throughout
- Script 1: pain-point angle. Script 2: future state only, no system breakdown. Script 3: problem recognition hook leading into the offer.
- System pillars: one outcome-led sentence per pillar maximum
- Never reveal exactly how the system works — preserve the curiosity gap

Package Structure — At a Glance

- 3 video scripts: Script 1 (pain-point), Script 2 (put us to work), Script 3 (problem hook)
- 5 headlines: direct offer, pain/self-ID, tribal truth, outcome/desire, qualifier
- 4 primary texts: ultra short, short form variation 2, short form variation 3, problem-first

---

12. A Final Note on Standards

The gold standard for output quality is the Connor Degginger (Invisalign) and Steven Lee (HVAC) packages. Study those carefully before writing your first package. Every asset in those campaigns passes the humanizer checklist, connects to the market's lived experience, and leads with benefits not features.

When in doubt, ask: would the target market read this and feel understood, or would they feel like they're being marketed to? There's a meaningful difference, and it shows up in results.

Write every package like it's the one that fills your client's calendar for the next quarter. Because it might be.

5-5-5 Standard Copy Package

THE STANDARD CAMPAIGN PACKAGE

5 Scripts · 5 Headlines · 5 Primary Texts

NOTE: These are just guidelines. You are welcome to change up the scripts, hooks, and angles if you think it leads to better conversions.

---

5 VIDEO SCRIPTS

Script 1 — Pain-Point Angle

Opens on the lived experience of the target market. Agitates the core problem, identifies the root cause, pivots to the system and guarantee. First person, camera facing. 90–120 seconds max.

Script 2 — Put Us to Work / Future State

Opens with a direct offer hook (e.g. “Put us to work for the next [X] days” or “Give us 90 days” or “In 90 days you’ll have…”). Paints the operational future state in specific detail. What does a normal week look like 90 days from now? No system breakdown, no pillar names. Outcome only.

Script 3 — Problem Recognition Hook

Opens on a specific, hyper-relatable moment the ideal prospect has lived through. Agitates the cost of the problem, pivots to the system at a benefit level only. Offer and guarantee come after agitation, never before.

Script 4 — Social Proof / Case Study Curiosity Angle

Leads with verified client results. Builds curiosity around the system without explaining how it works. Named outcomes by location or result only. Closes with guarantee and CTA to book a call.

Script 5 — Aspiration / Identity Angle

Speaks to who the prospect wants to become and why they built the business in the first place. More time, financial freedom, a business that runs without them. Bigger than operational outcomes. Closes with guarantee and CTA.

---

5 META HEADLINES

Each headline covers a distinct angle. No two share the same structure. Target length: 35–55 characters.

Headline 1 — Direct Offer
Number, timeframe, and guarantee in one line.

Headline 2 — Pain or Self-Identification
A question the right prospect answers immediately in their own head.

Headline 3 — Tribal Truth
An insight specific to this niche that only the right person would recognize.

Headline 4 — Outcome or Desire
Focused on what they want, not what they're avoiding.

Headline 5 — Qualifier or Specificity
Signals exactly who this is for and filters everyone else out.

---

5 PRIMARY TEXTS

Ultra Short
4–6 lines maximum. Opens with ALL CAPS niche callout on line one. States the offer, one qualifier line, guarantee, CTA. Every word earns its place.

Long Form Variation 2 — ALL-CAPS Headers
Opens with the direct offer and guarantee. Uses THE STRATEGY / WHY THIS WORKS / WHAT MAKES THIS DIFFERENT as section headers. System described at benefit level only. Proof points under WHY THIS WORKS. Closes with guarantee and CTA.

Long Form Variation 3 — Numbered Steps
Guarantee-led opener. Uses #1 through #4 numbered steps to walk through the system at a benefit level. One or two emojis as visual anchors. Proof points before the closing guarantee. Punchy and scannable.

Problem-First
Opens with a single sharp question the target market answers immediately in their own head. Agitates the cost of the problem. Clean one-line pivot to the system. Guarantee and CTA close it out. No section structure.

Social Proof

Leads with verified client results. Builds curiosity around the system without over-explaining. Connects results to the mechanism at a high level. Closes with guarantee and CTA to book a call.

STANDING RULES — ALL ASSETS

- Guarantee language identical across every asset in the same package.
- No em dashes, no tricolons, no staccato fragment stacks.
- No fabricated proof points, no ad platform names in consumer-facing copy.
- Benefits before process throughout every asset.
- Curiosity gap preserved on all system descriptions — never over-explain the mechanism.
- Copy humanizer pass applied before every delivery.
- 5th grade reading level throughout.
- Tone calibrated to niche audience: warmer for wellness/med spa, direct for trades, polished for professional services.
- Guarantee framed from the client's perspective: "you don't pay," "it's free," or "we keep working at no cost." Never "we work for free" as a standalone.
- No two scripts in the same package should open with the same structure or angle.
- Script 1 and Problem-First primary text share the same core angle.
- Social proof uses first name only — never full names.
- Line spacing generous throughout primary texts for mobile readability.

Prompts

COPYWRITER PROMPT LIBRARY

Copy and paste these into Claude at each stage of the campaign workflow

PROMPT 1	Start of Chat — Load context and standards
PROMPT 2	New Client — Upload files and get strategy
PROMPT 3	Write the Copy — Full package, all standards applied
PROMPT 4	Refinement — Targeted edits and clean-up

NOTE Sections in [BRACKETS] are variables. Replace them with actual client information before sending. Do not paste the brackets into Claude.

Campaign Package — What We Produce for Every Client

Every client receives the same 9-asset package. Reference this when briefing Claude on what to write.

Asset	Notes
Video Script 1	Pain-point or feast/famine angle. 60–120 seconds max.
Video Script 2 — Var. 2	"Put us to work" — future state only, no system breakdown
Video Script 3 — Var. 3	Problem recognition hook — opens on a hyper-specific moment
5 Meta Headlines	Across meaningfully different angles — direct offer, pain, outcome, tribal truth, qualifier
Ultra Short Primary Text	4–6 lines. Offer, qualifier, guarantee, CTA.
Short Form — Variation 2	ALL-CAPS headers: THE STRATEGY / WHY THIS WORKS / WHAT MAKES THIS DIFFERENT
Short Form — Variation 3	Guarantee-led opener. Numbered steps #1–#4. Emojis as anchors.
Problem-First Primary Text	Sharp opening question. Agitate. Pivot. No section structure.

PROMPT 1 — Start of Chat

Send this at the start of every new Claude session. Sets the role, loads project context, and establishes campaign structure.

```
You are a direct response copywriter for a marketing agency that produces
Meta ad campaign
packages for service-based business clients.

Read every file in this project — training guide, sample copy packages,
client briefs, and
reference documents — before we begin. Get fully up to speed on how we
write, the clients
we serve, the campaign structure we follow, and the copy standards we hold.

The standard campaign package for every client is:
- Video Script 1: Pain-point angle. 60–120 seconds. First person, camera
facing.
```

```
- Video Script 2 (Variation 2): Put us to work. Future state only. No system
breakdown.
- Video Script 3 (Variation 3): Problem recognition hook. Specific moment,
then offer.
- 5 Meta Headlines: Across meaningfully different angles.
- Ultra Short Primary Text: 4–6 lines. Offer, qualifier, guarantee, CTA.
- Short Form Variation 2: ALL-CAPS headers (THE STRATEGY / WHY THIS WORKS /
  WHAT MAKES THIS DIFFERENT).
- Short Form Variation 3: Guarantee-led opener. Numbered steps with emojis.
- Problem-First Primary Text: Sharp question, agitate, pivot, no section
structure.

Confirm you have read all project files and are ready for the first client.
```

PROMPT 2 — New Client Intake

Send this with the client PDF uploads. Claude will read everything, synthesize key details, flag any concerns, and propose a strategy — all before writing a single word.

NOTE Always wait for strategy approval before sending Prompt 3. Correct any issues at this stage to avoid revision rounds later.

```
New client: [CLIENT NAME]
Niche: [e.g. HVAC companies / Invisalign dental practices / med spas]
System name: [e.g. The Full Capacity Method]

[UPLOAD ALL CLIENT PDFs HERE]

[OPTIONAL: Their website is [URL] — visit it for additional depth.]

Read and internalize everything before forming any opinion. Do not write any
copy yet.

Then deliver:
1. Synthesis: exact guarantee language (word for word), system name and
pillars,
   credibility proof points, and ideal client profile.
2. Flags: anything missing, unverifiable, or that cannot go in the copy as
written.
3. Strategy: core angle for Script 1 and Problem-First, angle assignments
for all other
   assets, credibility approach, and tone recommendation.

Wait for my approval before writing anything.
```

PROMPT 3 — Write the Full Campaign Package

Send this after approving the strategy. Claude already has full client context — this triggers the write with all standards applied.

```
Approved. Write the full campaign package now.

- Video scripts: 120 seconds max at natural speaking pace
- Primary texts: generous line spacing for Meta mobile feed
- Guarantee language must be identical across every asset
- Run all copy through the copy humanizer skill before delivering
- Deliver everything in one clean output, clear labels, no editorial
comments
```

PROMPT 4 — Refinement Prompts

Short, targeted prompts for specific situations after the first draft. One or two sentences is almost always enough. Keep feedback direct.

Humanizer Pass

```
Run [this asset / all assets] through the copy humanizer skill thoroughly.
```

Too Feature-Heavy

```
This is reading too feature-heavy. Rewrite focusing on outcomes and benefits
— what the
client actually experiences, not what the system does. Keep the core
message.
```

Not Connecting to the Market

```
This isn't specific enough to the market. Use the language a [niche] owner
actually uses.
The right person should read this and feel like you're describing their
week.
```

Simplify

```
Trim [this asset / this section] down. Shorter, simpler, 5th grade reading
level.
Cut anything that isn't earning its place.
```

Stronger Headlines

```
These headlines aren't strong enough. Give me [3 / 5] new options across
different angles —
direct offer, pain, outcome, tribal truth, qualifier. Each one should be
specific to [niche],
not generic. No two options should use the same structure.
```

Alternative Options

```
Give me 3 alternatives for [this line / this section]. Same message,
different phrasing.
Number them. No commentary.
```

Apply Change Across All Assets

```
Apply that change to every asset where relevant. Deliver the full updated
package
in one clean output.
```

Rewrite One Asset

```
Rewrite [ASSET NAME] only. Keep everything else. Run the humanizer skill
before delivering.
```

Compile Clean Final Output

```
Compile the full campaign package in one clean output. All assets, clear
labels,
no comments. Guarantee language identical across every asset. Publish-ready.
```

Too Problem-Focused / Needs More Desire

```
This is spending too much time on the problem. Shift toward what the
prospect actually
wants — their ambition, their desired outcome, what success looks like for
them.
```

Script Too Long

```
This script runs long. Trim it to 120 seconds max at natural speaking pace.
Trim the system description first. Keep the hook, the pivot, and the
guarantee.
```

Quick Reference

Prompt	Use When	Frequency
Prompt 1	Starting a new Claude session	Every session
Prompt 2	New client files uploaded	Every new client
Prompt 3	Strategy approved, ready to write	Every new client
4 — Humanizer	Copy feels AI or robotic	As needed
4 — Too Feature-Heavy	Explaining the system, not the benefit	Common
4 — Not Connecting	Reads generic, could be any agency	Common
4 — Simplify	Too long or complicated	As needed
4 — Headlines	Weak, generic, or too similar	As needed
4 — Alternatives	Want options before deciding	As needed

4 — Apply Across	One change applies to the whole package	Common
4 — Rewrite One	One asset needs a full redo	As needed
4 — Compile Output	Need final clean package for delivery	Every campaign
4 — Desire Focus	Too problem-heavy, not desire-led	As needed
4 — Script Too Long	Script runs over 120 seconds	As needed
